Fishes of the northern Gulf of Mexico.

Date
1975

Author
Walls, J.G.

Abstract
This book is an illustrated, nontechnical guide to the 502 species of fishes known to occur in the northern Gulf of Mexico between Brownsville, Texas, and Tampa Bay, Florida. The accounts provide concise descriptions of the families and species of this area, with brief comments on range, rarity, and other information as needed. Coverage includes all species of the northern Gulf described or recorded in the literature before the end of 1973, ranging in depth from estuaries to approximately twenty-five fathoms.

The Gulf of Mexico (Spanish: Golfo de México) is an ocean basin and a marginal sea of the Atlantic Ocean, largely surrounded by the North American continent. It is bounded on the northeast, north and northwest by the Gulf Coast of the United States, on the southwest and south by Mexico, and on the southeast by Cuba. The U.S. states of Texas, Louisiana, Mississippi, Alabama, and Florida border the Gulf on the north, which are often referred to as the "Third Coast", in comparison with the U.S. Atlantic Gulf of Mexico Fish Chart. Charter Fishing in Louisiana. Gulf of Mexico Fish Species..... The Gulf of Mexico has eight of the top twenty fishing ports in the nation by dollar value. In 2008, over 24.1 million recreational fishing trips were made, catching 190 million fish from the Gulf of Mexico and surrounding waters. There are four major industries in the Gulf of Mexico -- fishing, shipping, tourism and of course, oil. These four industries account for some $234 billion annually in economic activity, according to a 2007 study published by Texas A&M; University Press. Did you know that the Gulf of Mexico is the ninth largest body in the world, and supports some of the largest fisheries in the world? The Gulf is a spectacular space with an astonishing diversity of species, and yet.
